

TABLET AND PHONE - MENUS

1. Burger Menu and Search Icon Placement

← The Burger menu icon and the Search icon should be placed as shown.

2. Search Box Placement

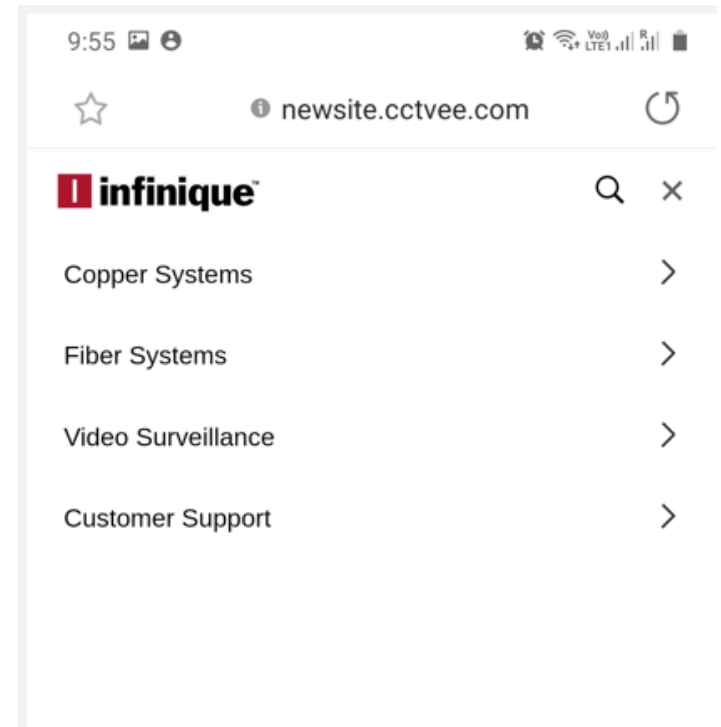

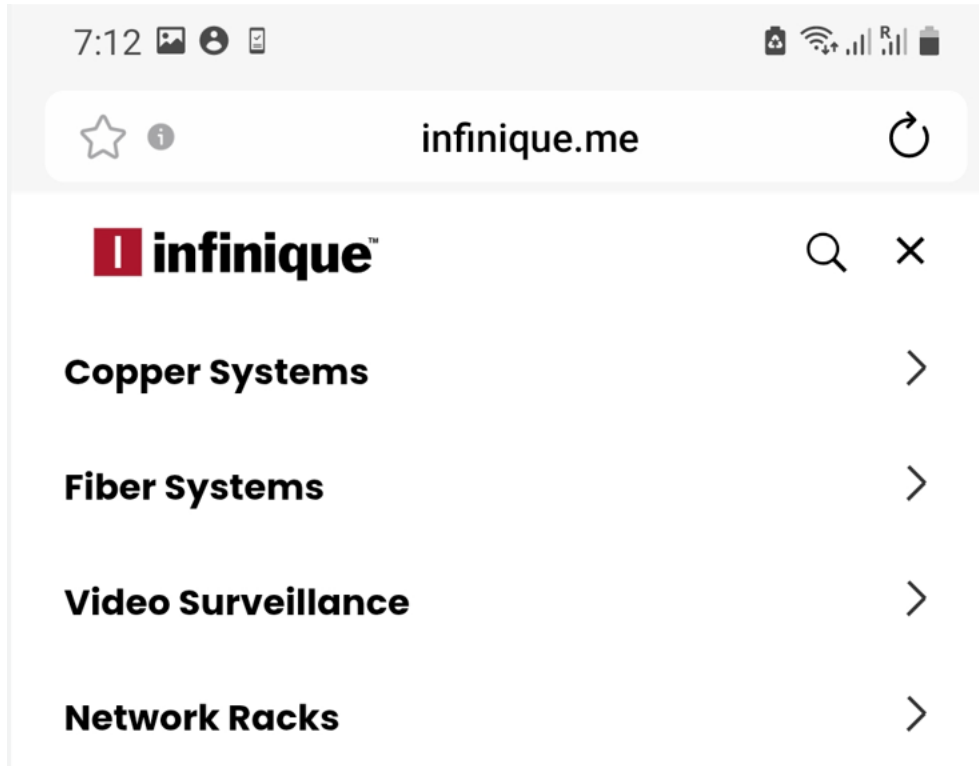

When you click the Search icon, the screen should look like this.

Place the 'x' in the place of the Search icon

Tapping on the 'x' should close the search menu and back to the main screen as below

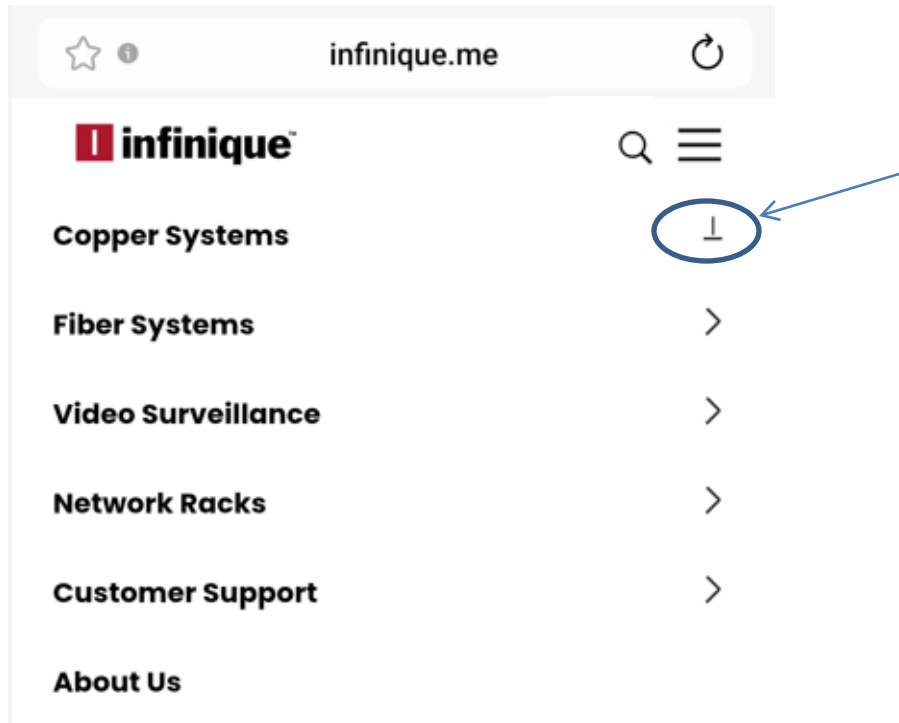

3. When user taps Burger Menu

The menu should appear when the Burger menu icon is tapped.
The 'X' should be placed in the place where the Burger menu icon was earlier (as shown in the image above)

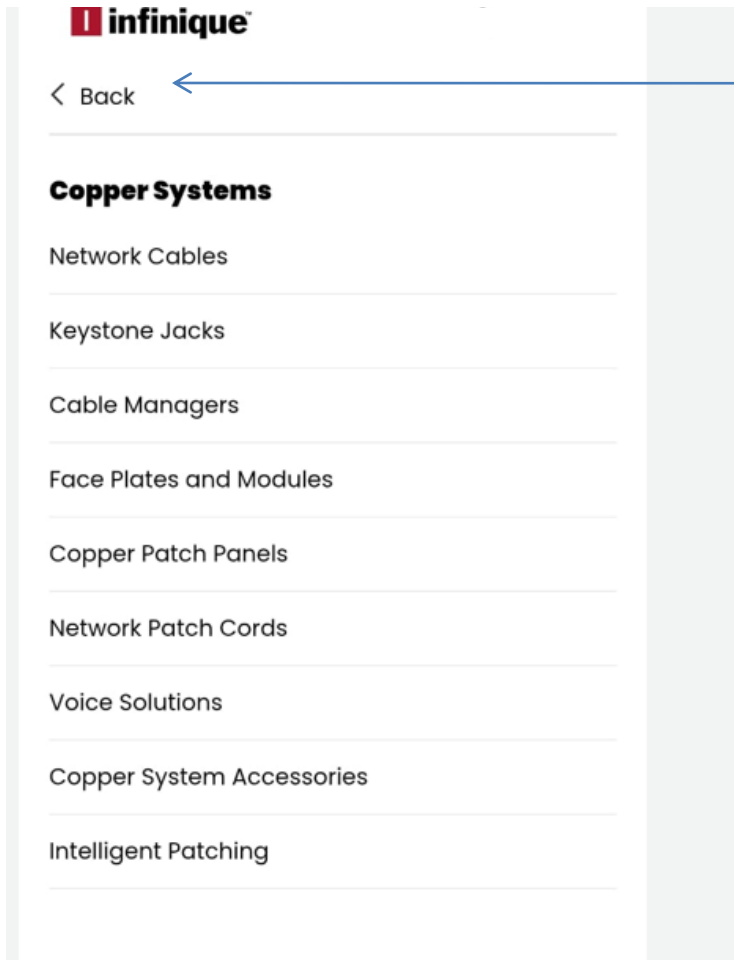

4. When user taps in the Menu

We are seeing this issue.

When we tap the menu on the arrow (>), we are getting this icon. If we tap again, then we are getting the menu of the section. Example: Here when we tap, Copper Systems (>), we are getting this screen. Same is happening for all the menus.

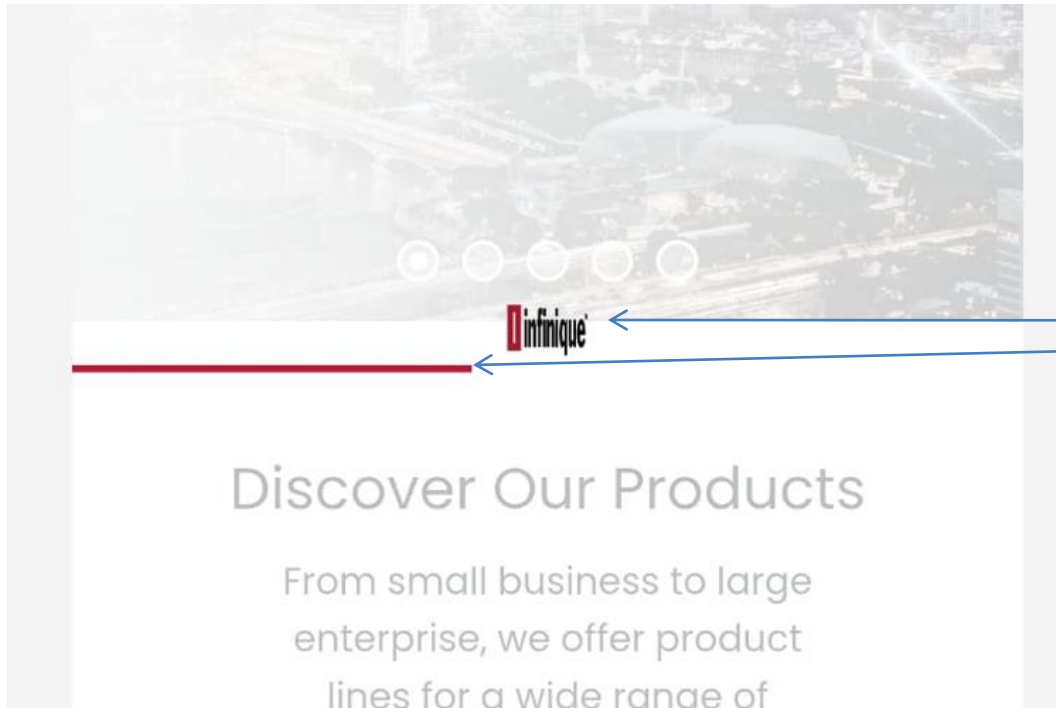

5. When user taps Back button in the Menu

After we enter this menu, when we tap 'Back', it is exiting the menu completely instead of going back one level to the below screen.

6. When website is loading

When the website is loading we are seeing infinique logo (square+font) and then a red line.

Could you please just use the red square without the font (infinique). Also remove the red line which is coming. So it will be just the red square spinning.
